(Legislative acts)

## REGULATIONS

REGULATION (EU) 2016/679 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL.

of 27 April 2016

on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation)

(Text with EEA relevance)

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 16 thereof,

Having regard to the proposal from the European Commission,

After transmission of the draft legislative act to the national parliaments,

Having regard to the opinion of the European Economic and Social Committee (¹),

Having regard to the opinion of the Committee of the Regions (²),

The GDPR does not apply to anonymous data where the data subject is no longer identifiable.

- (26) The principles of data protection should apply to any information concerning an identified or identifiable natural person. Personal data which have undergone pseudonymisation, which could be attributed to a natural person by the use of additional information should be considered to be information on an identifiable natural person. To determine whether a natural person is identifiable, account should be taken of all the means reasonably likely to be used, such as singling out, either by the controller or by another person to identify the natural person directly or indirectly. To ascertain whether means are reasonably likely to be used to identify the natural person, account should be taken of all objective factors, such as the costs of and the amount of time required for identification, taking into consideration the available technology at the time of the processing and technological developments. The principles of data protection should therefore not apply to anonymous information, namely information which does not relate to an identified or identifiable natural person or to personal data rendered anonymous in such a manner that the data subject is not or no longer identifiable. This Regulation does not therefore concern the processing of such anonymous information, including for statistical or research purposes.

# Innovation via Anonymisation & Aggregation!

## K-Anonymity

- A record cannot be distinguished from at least  $k-1$  others
- Approach
  - **Suppression** certain values of the attributes are replaced by an asterisk
  - **Generalization** individual values of attributes are replaced by with a broader category

A 3-anonymous patient table

Zipcode	Age	Disease
476**	2*	Heart Disease
476**	2*	Heart Disease
476**	2*	Heart Disease
4790*	$\geq 40$	Flu
4790*	$\geq 40$	Heart Disease
4790*	$\geq 40$	Cancer
476**	3*	Heart Disease
476**	3*	Cancer
476**	3*	Cancer

Samarati, Pierangela, and Latanya Sweeney. *Protecting privacy when disclosing information: k-anonymity and its enforcement through generalization and suppression.* Technical report, SRI International, 1998.

# Innovation via Anonymisation & Aggregation!

## Is K-Anonymity enough?

### Homogeneity Attack

Bob	
<b>Zipcode</b>	<b>Age</b>
47678	27

A 3-anonymous patient table

Zipcode	Age	Disease
476**	2*	Heart Disease
476**	2*	Heart Disease
476**	2*	Heart Disease
4790*	$\geq 40$	Flu
4790*	$\geq 40$	Heart Disease
4790*	$\geq 40$	Cancer
476**	3*	Heart Disease
476**	3*	Cancer
476**	3*	Cancer

### Background Knowledge Attack

Carl	
<b>Zipcode</b>	<b>Age</b>
47673	36

$\kappa$ -anonymity has deficiencies when  
sensitive values in an equivalence class lack diversity or  
the attacker has background knowledge

# Innovation via Anonymisation & Aggregation! K-Anonymity & L-Diversity

- Each equivalence class has at least  $\ell$  well-represented sensitive values

## Similarity Attack

Bob	
<b>Zip</b>	<b>Age</b>
47678	27

## Conclusion

- Bob's salary is between [20k,40k].
- Bob has some stomach-related disease.

A 3-diverse patient table

Zipcode	Age	Salary	Disease
476**	2*	20K	Gastric Ulcer
476**	2*	30K	Gastritis
476**	2*	40K	Stomach Cancer
4790*	$\geq 40$	50K	Gastritis
4790*	$\geq 40$	100K	Flu
4790*	$\geq 40$	70K	Bronchitis
476**	3*	60K	Bronchitis
476**	3*	80K	Pneumonia
476**	3*	90K	Stomach Cancer

**$\ell$ -diversity does not consider the semantic meanings of the sensitive values**

# Innovation via Anonymisation & Aggregation!

## K-Anonymity, L-Diversity & T-Closeness

- Distribution of sensitive attributes within each quasi identifier group should be “close” to their distribution in the entire original database

### Background Knowledge Attack

Bob	
<b>Zip</b>	<b>Age</b>
47678	27

### Conclusion

- Bob could have Flu, Heart Disease or Cancer!

A completely generalised table

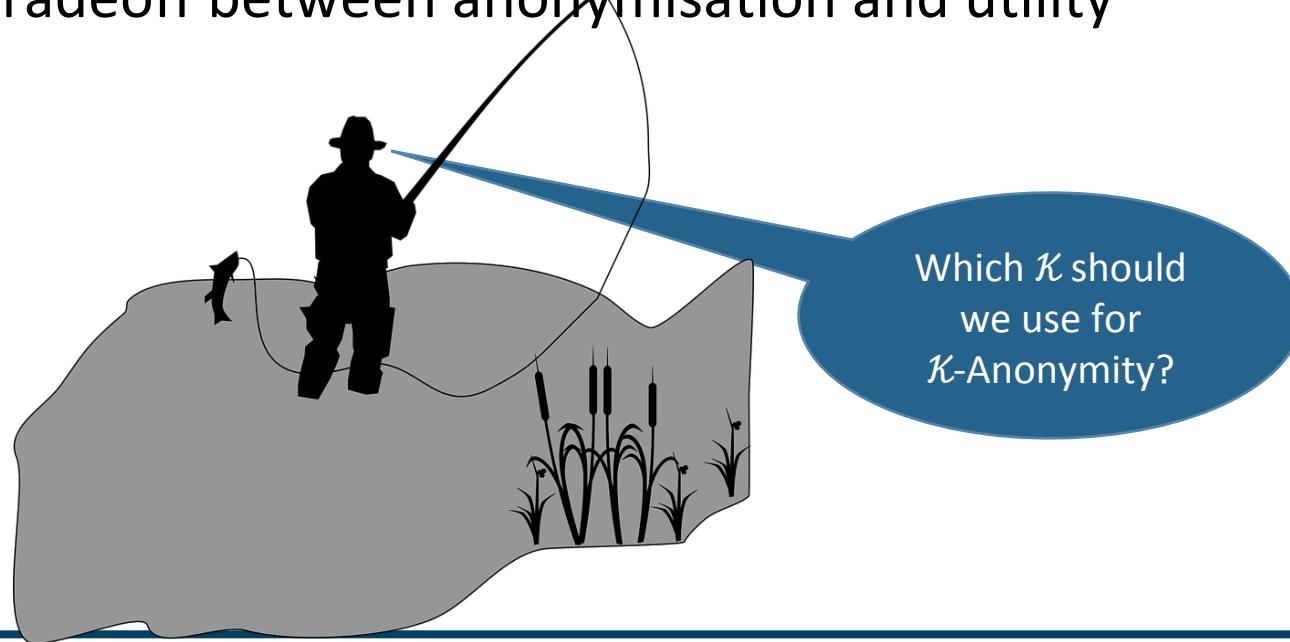

Age	Zipcode	.....	Gender	Disease
*	*	.....	*	Flu
*	*	.....	*	Heart Disease
*	*	.....	*	Cancer
.	.	.....	.	.
.	.	.....	.	.
.	.	.....	.	.
*	*	.....	*	Gastritis

A released table

Age	Zipcode	.....	Gender	Disease
2*	476**	.....	Male	Flu
2*	476**	.....	Male	Heart Disease
2*	476**	.....	Male	Cancer
.	.	.....	.	.
.	.	.....	.	.
.	.	.....	.	.
≥50	4766*	.....	*	Gastritis

# Innovation via Anonymisation & Aggregriation!

- A layered approach to anonymisation may be needed
- Even then  $\kappa$ ,  $\mathcal{L}$  &  $\mathcal{I}$  are highly dependent on the data
- Also, there is a tradeoff between anonymisation and utility

***Considering that it is getting harder and harder to guarantee anonymity while preserving utility,  
what is the alternative?***

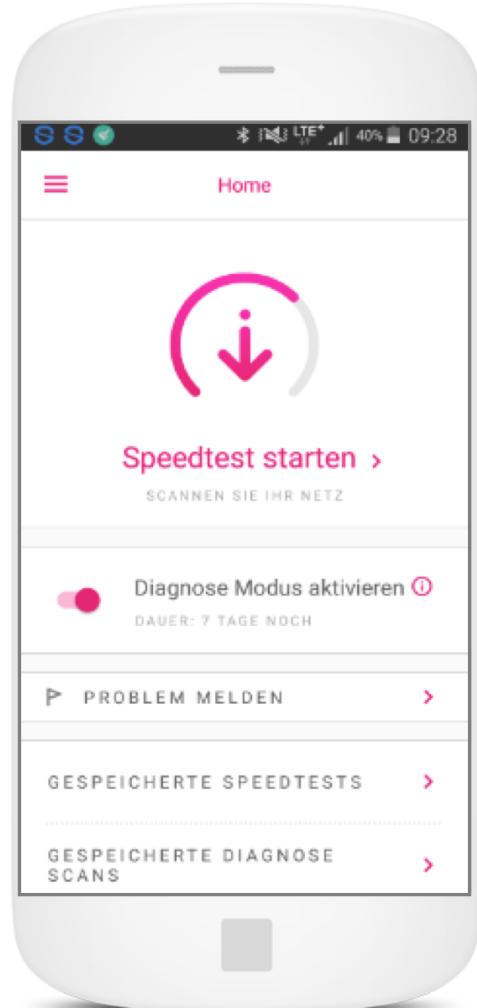

Innovation via Consent!

# SPECIAL Use Cases

proximus

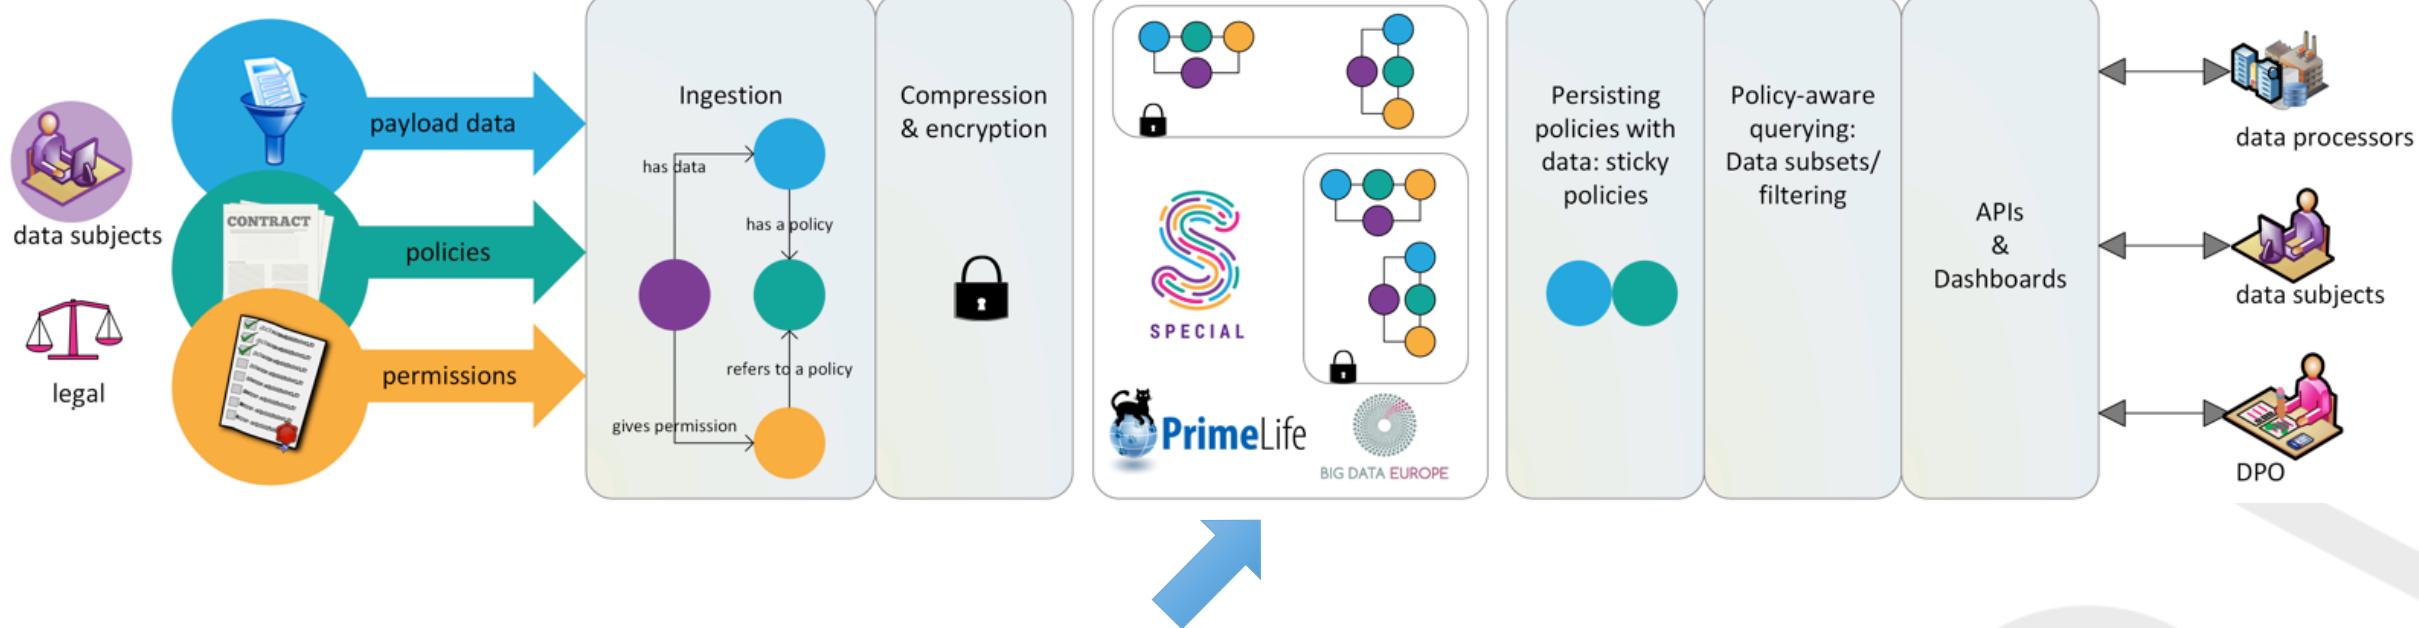

Deutsche  
Telekom

# SPECIAL Technical Foundations

## Big Data and Privacy Foundations

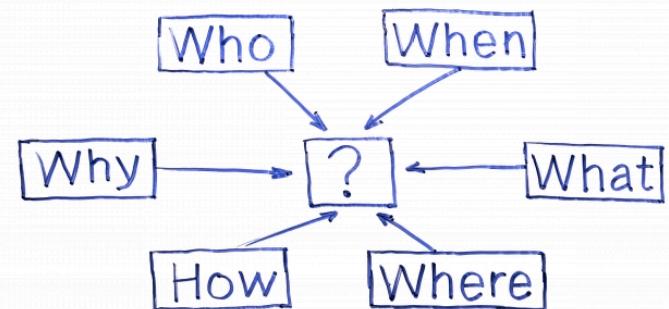

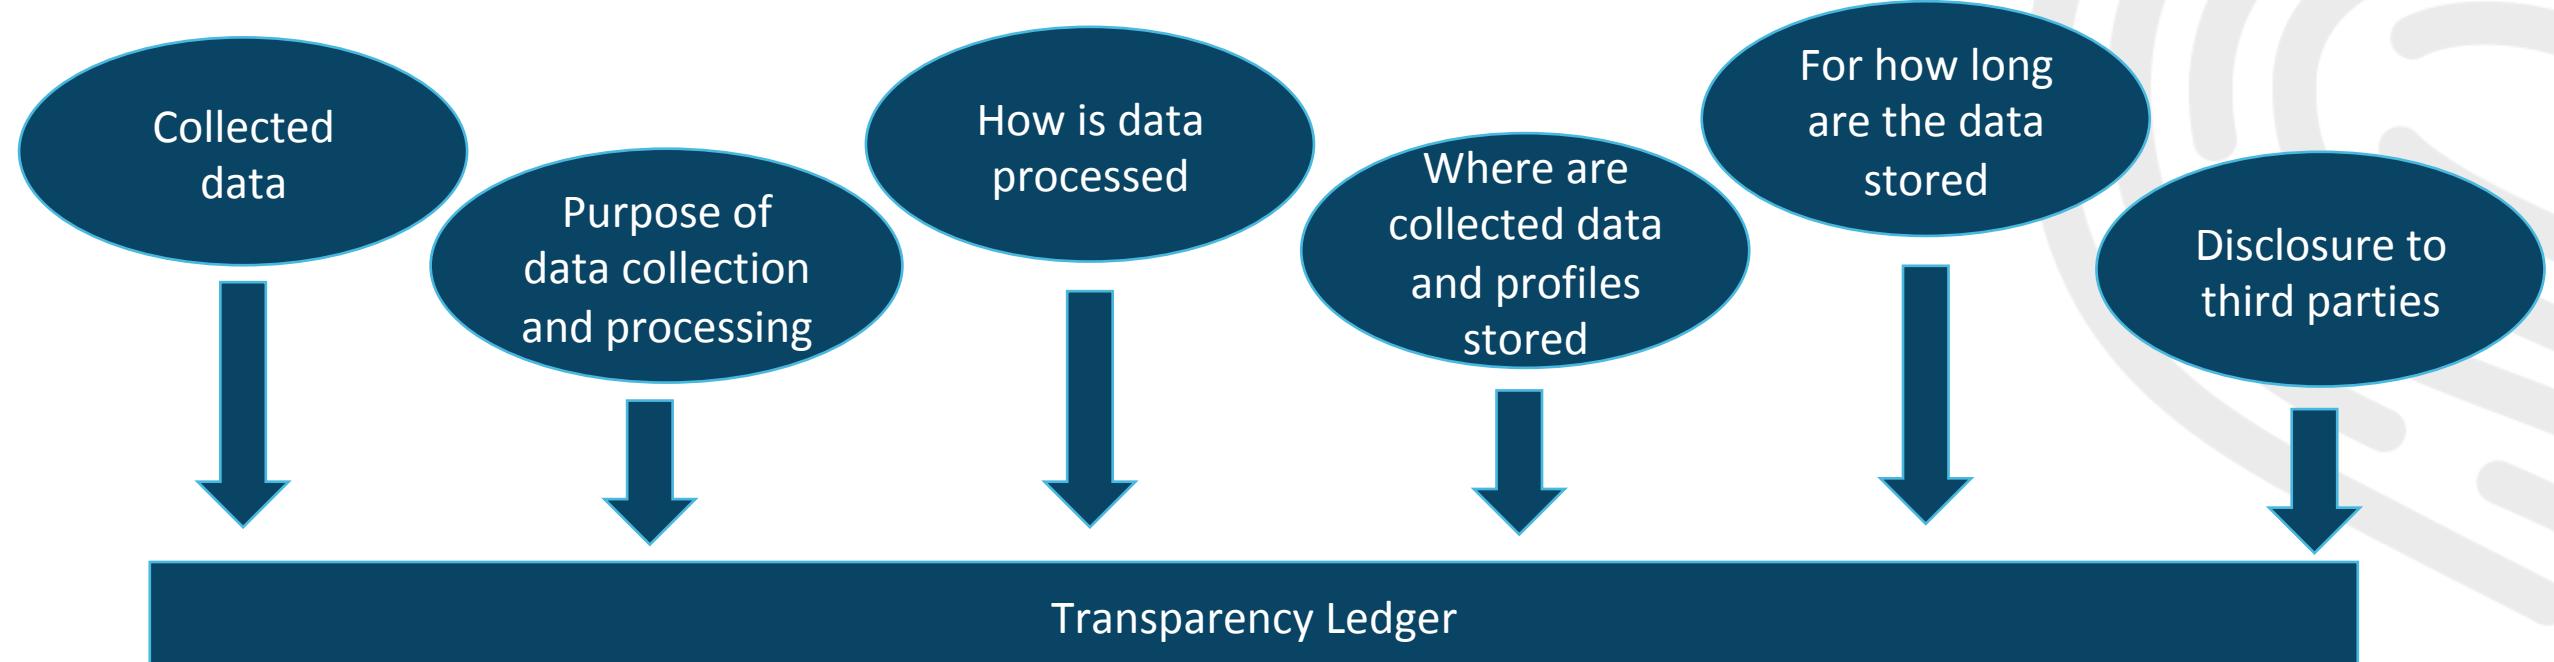

SPECIAL leverages past infrastructure and lessons learned

- ❖ **Big Data Europe** scalability and elasticity
- ❖ **PrimeLife** policy languages, access control policies, release policies and data handling policies
- ❖ The **Platform for Privacy Preferences Project (P3P)** and the **Open Digital Rights Language (ODRL)** vocabularies

# SPECIAL Technical Foundations

## Minimal Core Model

# Usage policy language

## Syntax and expressivity

- Usage policy language, which can be used to express both the data subjects' **consent**, data controllers usage requests, fragments of the **GDPR**, and business policies
- The foundation of the policy language was the **Minimal Core Model (MCM)**
- We propose a new policy language that extensively **re-uses standards** based privacy-related vocabularies
- We are able to leverage existing **Web Ontology Language (OWL)** based reasoners out of the box

Figure 1.1: SPECIAL's Usage Policy Language Grammar

```
UsagePolicy :='ObjectUnionOf' '(' BasicUsagePolicy BasicUsagePolicy { BasicUsagePolicy } ')'
| BasicUsagePolicy

BasicUsagePolicy :='ObjectIntersectionOf' '(' Data Purpose Processing Recipients Storage ')'

Data :='ObjectSomeValueFrom' '(' 'spl:hasData' DataExpression ')'

Purpose :='ObjectSomeValueFrom' '(' 'spl:hasPurpose' PurposeExpression ')'

Processing :='ObjectSomeValueFrom' '(' 'spl:hasProcessing' ProcessingExpression ')'

Recipients :='ObjectSomeValueFrom' '(' 'spl:hasRecipient' RecipientExpression ')'

Storage :='ObjectSomeValueFrom' '(' 'spl:hasStorage' StorageExpression ')'

DataExpression :='spl:AnyData' | DataVocabExpression

PurposeExpression :='spl:AnyPurpose' | PurposeVocabExpression

ProcessingExpression :='spl:AnyProcessing' | ProcessingVocabExpression

RecipientsExpression :='spl:AnyRecipient' | 'spl:Null' | RecipientVocabExpression

StorageExpression :='spl:AnyStorage' | 'spl:Null' |
'ObjectIntersectionOf' '(' Location Duration ')'

Location :='ObjectSomeValueFrom' '(' 'spl:hasLocation' LocationExpression ')'

Duration :='ObjectSomeValueFrom' '(' 'spl:hasDuration' DurationExpression ')'
| 'DataSomeValueFrom' '(' 'spl:durationInDays' IntervalExpression ')'
```

# Usage policy language

## Syntax and expressivity

### SPECIAL Namespace Prefixes

  ObjectSomeValuesFrom( spl:hasRecipient SomeRecipient )
  ObjectSomeValuesFrom( spl:hasStorage SomeStorage ) )
```

# Usage policy language

## Syntax and expressivity

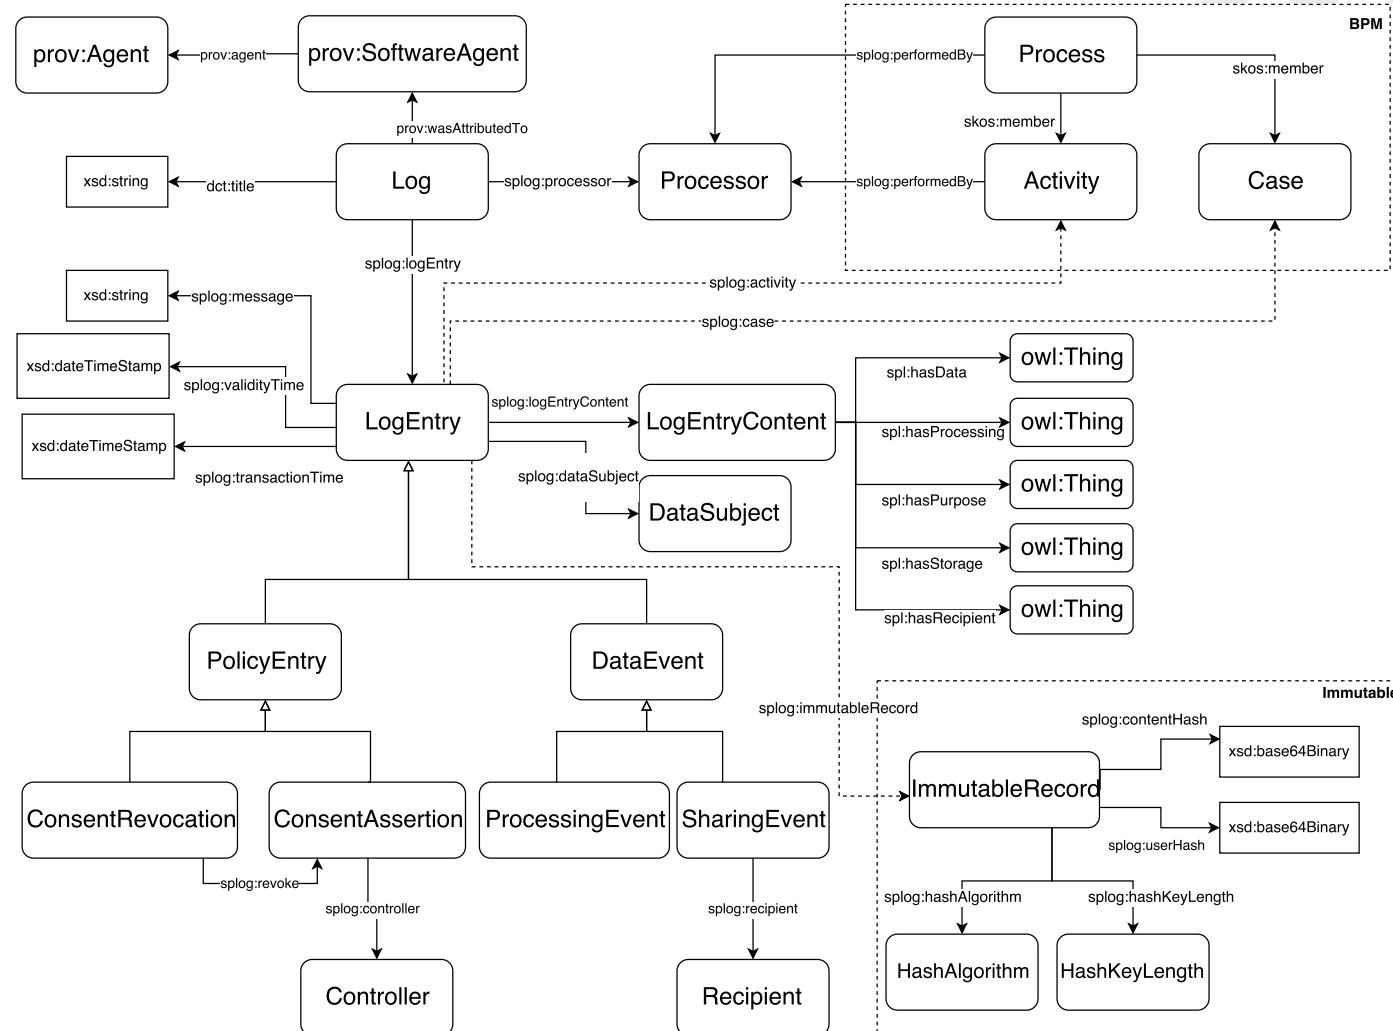

### Structure of a Usage Control Policy

```
ObjectIntersectionOf(  
    ObjectSomeValuesFrom( spl:hasData svd:Location)  
    ObjectSomeValuesFrom( spl:hasProcessing befit:SensorGathering)  
    ObjectSomeValuesFrom( spl:hasPurpose befit:HealthTracking)  
    ObjectSomeValuesFrom( spl:hasRecipient befit:Internal )  
    ObjectSomeValueFrom(spl:hasStorage  
        ObjectIntersectionOf(ObjectSomeValueFrom(spl:hasLocation :EU)  
            DataSomeValueFrom(spl:hasDuration  
                DatatypeRestriction(xsd:integer  
                    xsd:minInclusive "365"^^xsd:integer  
                    xsd:maxInclusive "1825"^^xsd:integer)  
            )))
```

# Provenance/event information

## Syntax and expressivity

- Development of a **log vocabulary** that reuses well-known vocabularies such as **PROV** for representing provenance metadata
- Demonstrate how provenance can be used to support transparency in data value chains

# Provenance/event information

## Syntax and expressivity

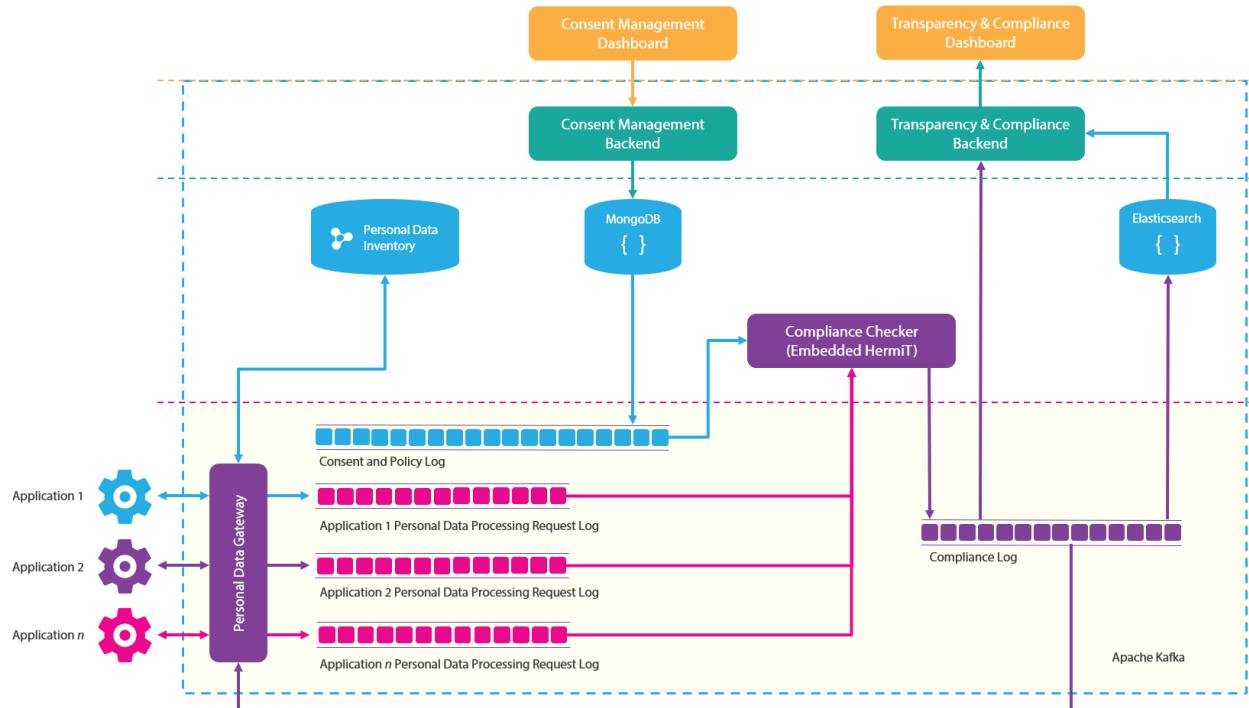

### A new event for Sue's BeFit device

```
befit:entry3918 a solog:ProcessingEvent ;  
solog:dataSubject befit:Sue ;  
dct:description "Store location in our database in Europe"@en ;  
solog:transactionTime "2018-01-10T13:20:50Z^^xsd:dateTimeStamp ;  
solog:validityTime "2018-01-10T13:20:00Z^^xsd:dateTimeStamp ;  
solog:eventContent befit:content3918 ;  
solog:immutableRecord befit:iRec3918 .
```

### The content of a new event for Sue's BeFit device

```
befit:content3918 a solog:LogEntryContent ;  
spl:hasData svd:Location ;  
spl:hasProcessing befit:SensorGathering ;  
spl:hasPurpose befit:HealthTracking ;  
spl:hasStorage [ spl:haslocation :EU ] ;  
spl:hasRecipient [ a svr:Ours ] .
```

# Transparency and compliance checking platforms

- Data processing and sharing event logs are stored in the **Kafka** distributed streaming platform, which in turn relies on Zookeeper for configuration, naming, synchronization, and providing group services.
- We assume that consent updates are infrequent and as such usage policies and the respective vocabularies are represented in a **Virtuoso triple store**.
- The compliance checker, which includes an embedded
- A **HermiT reasoner** uses the consent saved in Virtuoso together with the application logs provided by Kafka to check that data processing and sharing complies with the relevant usage control policies.
- As logs can be serialized using JSON-LD, it is possible to benefit from the faceting browsing capabilities of **Elasticsearch** and the out of the box visualization capabilities provided by **Kibana**.

### Abstract

This document specifies *splog*, a vocabulary to log data processing and sharing events given a consent provided by a data subject. We also model the consent actions related to revocation

The screenshot shows the SPECIAL Privacy Dashboard. It includes sections for General Information (Name: SPECIAL, Address: Rue Robert Stumper, 2350 Luxembourg, Luxembourg), Timeline (The SPECIAL (Spatiotemporal Policy-aware Linked Data Architecture For Privacy, Transparency and Control) project is funded by the European Commission, funded under the H2020/ICT-2016-1 Big Data PPP call (Privacy-preserving Big Data) and will continue until the 31st of January 2017 and will continue for three years.), Policies (What data is processed and for what purposes?), and Data Processing (What kind of processing took place? Which data was used?). A pie chart shows data categories: Admin (19.1%), Accounting (20.1%), Banking (18.6%), Auditing (19.8%), and Computer (18.6%).

The screenshot shows the W3C Data Privacy Vocabularies and Controls Community Group page. It features the W3C logo and a banner for "COMMUNITY & BUSINESS GROUPS". Below the banner, there are sections for "CURRENT GROUPS" and "Tools for this group".

[Home](#) / Data Privacy Vocabularies...

## DATA PRIVACY VOCABULARIES AND CONTROLS COMMUNITY GROUP

The mission of the W3C Data Privacy Vocabularies and Controls CG (DPVCG) is to develop a taxonomy of privacy terms, which include in particular terms from the new European General Data Protection Regulation (GDPR), such as a taxonomy of personal data as well as a classification of purposes (i.e., purposes for data collection), and events of disclosures, consent, and processing such personal data.

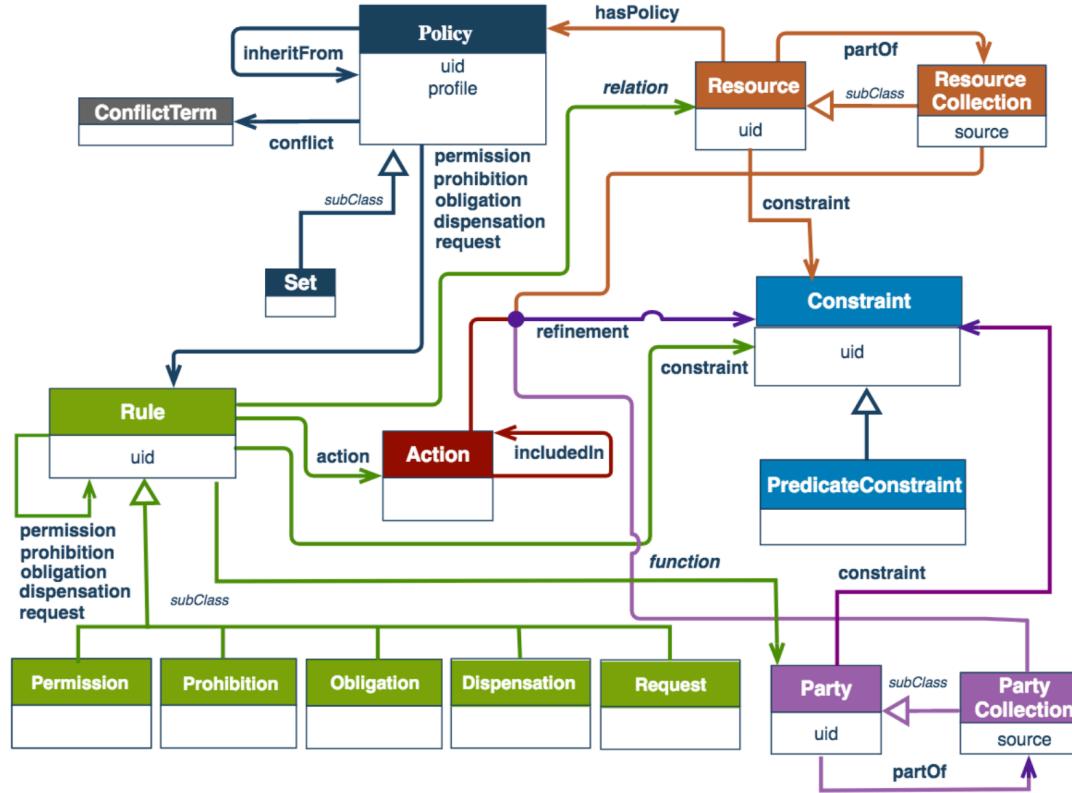

The Community Group shall officially start on 25th of May 2018, the official date of the GDPR coming into force, as a result of the W3C [Workshop on Data Privacy Controls and Vocabularies](#) in Vienna earlier this year.
