Cyber-Physical Social Systems (CPSSs)

CitySpin Use Cases

The screenshot shows the CitySpin project website. At the top is the CitySpin logo with a stylized building icon and the text "CITY SPIN CYBER-PHYSICAL SOCIAL SYSTEMS FOR CITY-WIDE INFRASTRUCTURES". Below the logo is a navigation bar with links: "CITYSPIN PROJECT", "PARTNERS", "RESULTS", "DELIVERABLES", and "NEWS". The main content area has a title "CitySPIN Project" and a paragraph about the project's aim to create a platform for cyber-physical social systems. It also mentions funding from the Austrian Research Promotion Agency (FFG) and partners like Wiener Stadtwerke, TU Wien, and WU Wien.

Smart city infrastructures such as transportation and energy networks are evolving into so-called **Cyber-Physical Social Systems (CPSSs)** that collect and leverage citizens' data in order to adapt services to citizens' needs

- Scenario 1: A personalized mobility planning
- Scenario 2: Event partnership
- Scenario 3: A fully-fledged privacy dashboard
- Scenario 4: Decision support for WStW planners

Abstract

The Open Digital Rights Language (ODRL) is a policy expression language that provides a flexible and interoperable information model, vocabulary, and encoding mechanisms for representing statements about the usage of content and services.

This document constitutes an ODRL profile that adapts the ODRL Core Model and Vocabulary with concepts and terms to support regulatory compliance checking of business policies.

In essence, ODRL Regulatory Compliance Profile policies are used to represent regulatory permissions, prohibitions, obligations, and dispensations, which may be limited by constraints (e.g., temporal, spatial).

Transparency and compliance checking

Subsumption Algorithm

- The development of a compliance checking algorithm for the SPECIAL policy language devised in T2.1
- A company's policy can be checked for compliance with data subjects' consent and with part of the GDPR by means of **subsumption queries**
- We provide a **complete and tractable structural subsumption algorithm** for compliance checking
- Detailed in *D2.4 & D2.8 Transparency and Compliance Algorithms*

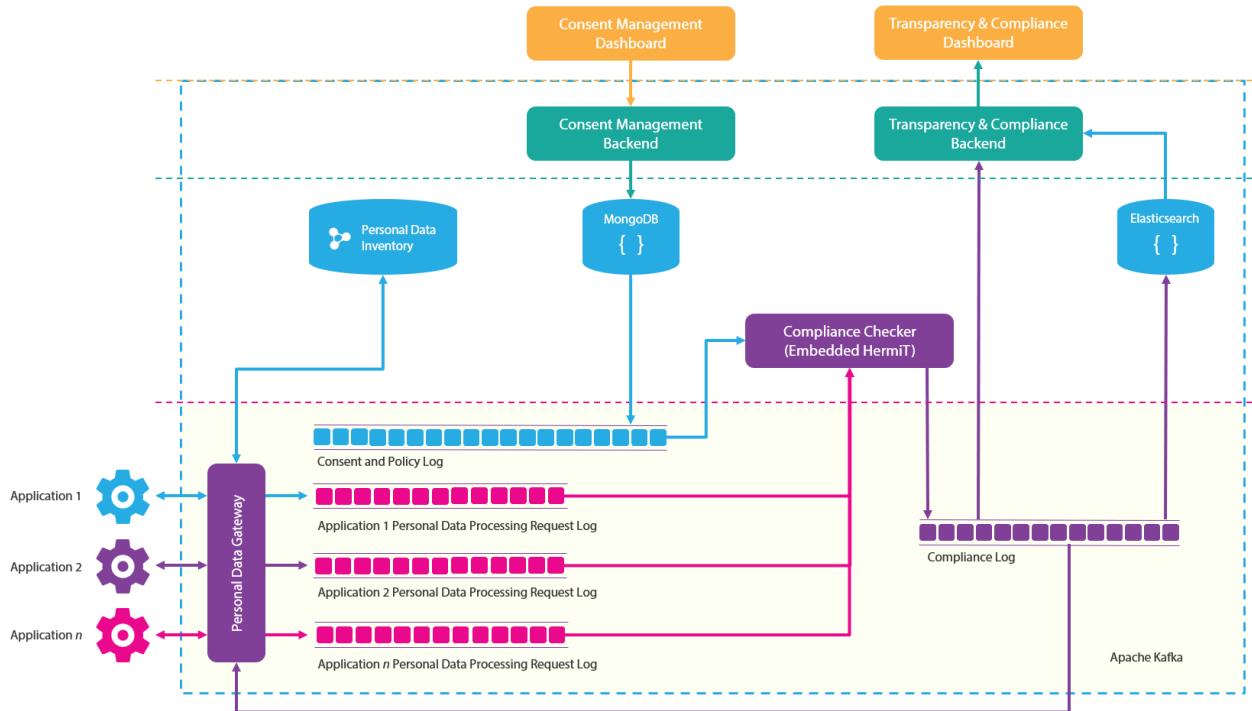

Algorithm 1: $\text{STS}(\mathcal{K}, C \sqsubseteq D)$

Input: \mathcal{K} and an elementary $C \sqsubseteq D$ where C is normalized
Output: true if $\mathcal{K} \models C \sqsubseteq D$, false otherwise
Note: Below, by $C = C' \sqcap C''$ we mean that either $C = C'$ or C' is a conjunct of C (possibly not the first one)

```
1 begin
2   if  $C = \perp$  then return true
3   if  $D = A$ ,  $C = A' \sqcap C'$  and  $A' \sqsubseteq^* A$  then return true
4   if  $D = [l, u](f)$  and  $C = [l', u'](f) \sqcap C'$  and  $l \leq l'$  and
       $u' \leq u$  then return true
5   if  $D = \exists R.D'$ ,  $C = (\exists R.C') \sqcap C''$  and
       $\text{STS}(\mathcal{K}, C' \sqsubseteq D')$  then return true
6   if  $D = D' \sqcap D''$ ,  $\text{STS}(\mathcal{K}, C \sqsubseteq D')$ , and
       $\text{STS}(\mathcal{K}, C \sqsubseteq D'')$  then return true
7   else return false
8 end
```

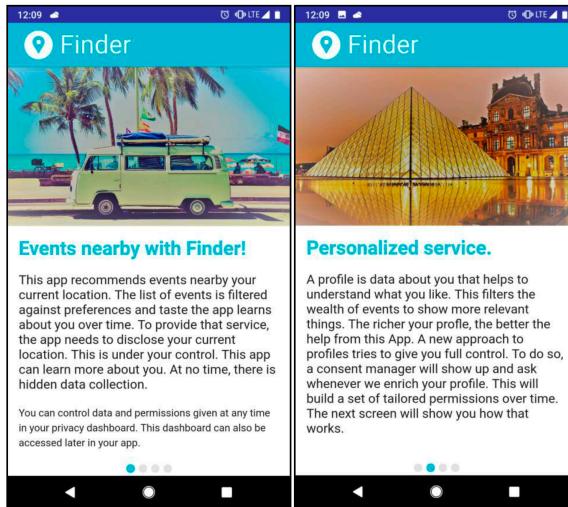

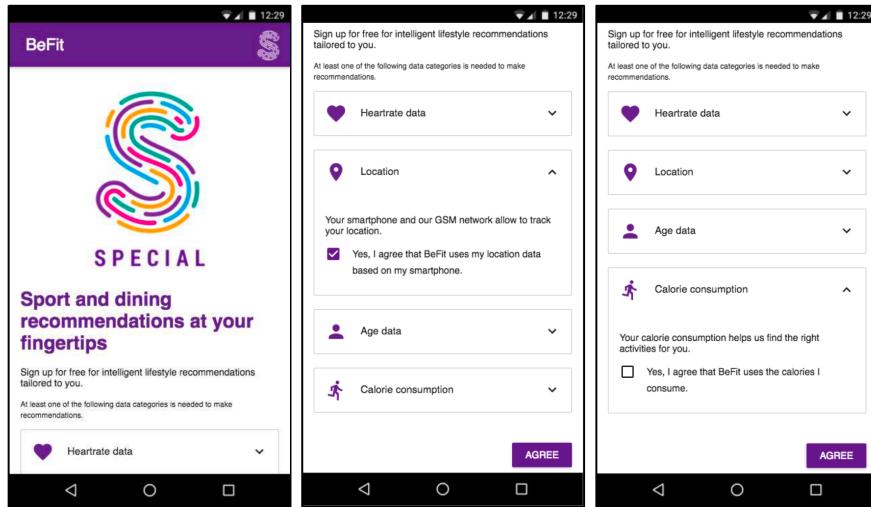

Transparency and compliance checking

Stream processing platform

- Data processing and sharing event logs are stored in the **Kafka** distributed streaming platform, which in turn relies on Zookeeper for configuration, naming, synchronization, and providing group services.
- We assume that consent updates are infrequent and as such usage policies and the respective vocabularies are represented in a **Virtuoso triple store**.
- The compliance checker, which includes an embedded **HermiT reasoner**, uses the consent saved in Virtuoso together with the application logs provided by Kafka to check that data processing and sharing complies with the relevant usage control policies.
- As logs can be serialized using JSON-LD, it is possible to benefit from the faceting browsing capabilities of **Elasticsearch** and the out of the box visualization capabilities provided by **Kibana**.

Towards Common Data Spaces

Challenges & Opportunities

- Standardisation of vocabularies (data, processing, purpose, storage, sharing) is difficult
- There are cognitive limitations in terms of understanding consent and transparency
- GDPR Compliance is only the tip of the iceberg, from a usage control perspective we also need to consider other regulations, licenses, social norms, cultural differences
- From a data spaces perspective, we need to embrace distributed and decentralised systems, which complicates things further
- Ensuring such systems are well behaved is crucial to success (i.e., all usage constraints are adhered to and the system as a whole works as expected)

The SPECIAL Usage Policy Language

version 0.1

Unofficial Draft 06 April 2018

Editor:

Javier D. Fernández (Vienna University of Economics and Business)

Authors:

Piero Bonatti (Università di Napoli Federico II)
Sabrina Kirrane (Vienna University of Economics and Business)
Iliana Mineva Petrova (Università di Napoli Federico II)
Luigi Sauro (Università di Napoli Federico II)
Eva Schleihahn (Unabhängiges Landeszentrum für Datenschutz (ULD))

This document is licensed under a Creative Commons Attribution 3.0 License.

Abstract

This document specifies usage policy language of SPECIAL. The usage policy language is meant to express both the data subjects' consent and the data usage policies of data controllers in formal terms, understandable by a computer, so as to automatically verify that the usage of personal data complies with data subjects' consent.

The ontology defined in this document is publicly available at <http://www.specialprivacy.eu/langs/usage-policy>.

W3C COMMUNITY & BUSINESS GROUPS

DATA PRIVACY VOCABULARIES AND CONTROLS COMMUNITY GROUP

The mission of the W3C Data Privacy Vocabularies and Controls CG (DPVCG) is to develop a taxonomy of privacy terms, which include in particular terms from the new European General Data Protection Regulation (GDPR), such as a taxonomy of personal data as well as a classification of purposes (i.e., purposes for data collection), and events of disclosures, consent, and processing such personal data.

The Community Group shall officially start on 25th of May 2018, the official date of the GDPR coming into force, as a result of the W3C [Workshop on Data Privacy Controls and Vocabularies](#) in Vienna earlier this year.
